

LMS — Analysis & Rebuild Documentation

This directory (and its sibling `../rebuild/`) is the output of a full-system audit of the Theraptly LMS conducted on **2026-07-05**. It exists in **three access tiers of the same findings** plus a full rebuild specification set.

Analysis report — three tiers, one source of truth

Tier	File	Audience	What it is
Executive	<code>EXECUTIVE-SUMMARY.md</code>	Founders, buyers, compliance leads	One-page verdict, risk posture, the 8 things that must change before scale, and cost/effort framing. No code.
Technical	<code>SYSTEM-ANALYSIS-REPORT.md</code>	Engineers, architects	The complete report: every subsystem, every finding with <code>file:line</code> evidence, severity, and a concrete fix.
Shareable	Published claude.ai Artifact (URL in the commit / PR)	Anyone, read-only	An interactive HTML rendering of the same findings for browsing outside the terminal.

All three are generated from the **same finding register** (`FINDINGS-REGISTER.md`) — a flat, ID'd list (`F-001...`) so a finding can be referenced identically from a Jira ticket, a PR, or the exec deck.

Rebuild documentation

See `../rebuild/00-OVERVIEW.md` . The rebuild set specifies how to split the current Next.js monolith into a **retained Next.js frontend + a separate backend service + a separate worker service**, with data, AI, infrastructure, and HIPAA/SOC 2 specs detailed enough for an engineer or an agent to action.

How this was produced

Eleven parallel read-only discovery/audit passes over the codebase (data model, auth & multi-tenancy, API surface, AI pipeline & jobs, frontend, infrastructure, billing & cross-cutting concerns, testing & quality, an adversarial OWASP security audit, a HIPAA + SOC 2 gap analysis, and a performance & scalability review), then cross-verified and deduplicated. Every claim is anchored to `file:line` . **No product code was modified** in producing this analysis.
